Placed Trainees vs. Unplaced Trainees

Placement by Instructor

Training Performance

Training Duration Distribution

The majority of trainees (80) complete training in the 19-22 month range, slightly above the 18.2 month average. Only 4 trainees exceed 26 months, representing potential at-risk cases worth early monitoring

Placement by Training Duration

Placement rates remain strong across all training duration groups, suggesting training length alone is not a predictor of placement success. Instructor assignment appears to be a stronger determinant of outcome.

Airline Placement

Total Airlines
Hiring

Avg.
Placements Per
Airline
6.7

Geographic Placement Performance

Gray states represent regions with no current Skyborne enrollment. Expanding recruitment efforts into these untapped markets could broaden the trainee pipeline and diversify placement outcomes.

Airline Placement Rate by State

Trainees from Indiana and Missouri show the lowest placement rates. Targeted employer outreach and network development in these markets is recommended.

Instructor Performance Analysis

Instructor Performance Summary

Instructor	Avg. Training Duration	Placement Rate by Instructor
Charlotte Brooks	18.10	96.6%
Mia Collins	18.10	96.6%
Harper Simmons	18.38	86.2%
Isabella Hayes	18.48	86.2%
Ethan Murphy	17.75	78.6%
Lucas Bryant	17.79	71.4%
Daniel Cooper	18.50	67.9%

Insights, Recommendations & Limitations

Key Insights & Recommendations

- 83.5% placement rate across 25 airline partners, placing 167 of 200 trainees, a strong overall performance benchmark
- Instructor assignment is the strongest predictor of placement success.
 - Charlotte Brooks and Mia Collins achieved 96.6% placement rates while Daniel Cooper achieved 67.9%, a 28.7 percentage point gap that warrants immediate attention
- Training duration does not predict placement outcome. Placed and unplaced trainees trained for nearly identical durations (18.0 vs 18.9 months)
 - This suggests that early intervention based on time alone would be misguided.
- Trainees from AZ, CO, IL, LA, NY, OH, TN, VA, and WA achieved near-perfect placement rates
 - These states represent Skyborne's strongest recruitment markets
- IN and MO underperform on placement rates. Targeted employer outreach and airline network development in these markets is recommended.
- Placements are evenly distributed across all 25 airline partners at approximately 6.7 trainees per airline, indicating no single-airline dependency risk in Skyborne's placement network
- Gray states on the geographic map represent untapped recruitment markets with no current Skyborne enrollment
 - Expanding into these regions could diversify and grow the trainee pipeline

Data Limitations & Next Steps

- **Per-phase training duration:** The dataset provides only a single average phase duration per trainee. True phase-by-phase performance analysis was not possible with available data.
 - **Recommendation:** Capture individual phase completion dates and durations in the source system.
- **Phase-level dropout analysis:** The dataset records only final placement outcome with no milestone or checkpoint data. Identifying precisely where in the training pipeline trainees disengage was not possible.
 - **Recommendation:** Add phase completion status fields to track dropout points in real time.
- **Time to placement after graduation:** No graduation date or hire date fields exist in the dataset. Average time between program completion and airline placement could not be calculated.
 - **Recommendation:** Add graduation date and first day of employment fields to enable this metric in a future dashboard iteration.
- **Demographic analysis:** No demographic fields such as age, educational background, or prior aviation experience exist in the dataset. Cohort analysis was limited to geography, training duration, and instructor assignment.
 - **Recommendation:** Consider collecting relevant background data at enrollment to enable richer cohort segmentation
